

Expanded Network Solution | DIY

No need to be a tech guru to install and deploy a wireless network. EnGenius DIY solutions which consist of ceiling-mount EAP Series, and desktop access points/client bridges ECB Series make it easy and affordable for the non-tech guy to install. Choose from single band to dual band solutions to meet your everyday needs.

Expanded Network Solution | ALL PURPOSE

EnGenius All Purpose Access Points, such as the ENS Series, are suitable for both indoor and outdoor deployment scenarios. Fit with weather-proof housings, these cost effective long range solutions can be installed anywhere.

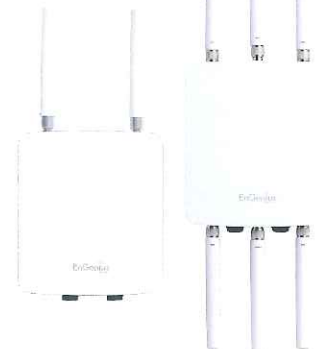

Expanded Network Solution | WISP

EnStations are high-performance long-range Point-to-Point wireless products that can deliver a robust longer range signal when used with another EnStation — up to 5 miles. EnStations can also be used in Client Bridge mode and pointed to a WISP base station, making them ideal CPE that can generate recurring revenue for Internet providers.

Expanded Network Solution | INDUSTRIAL

Built with Industrial grade material, the ENH Series are built with waterproof housing for harsh outdoor environments. From deployments to outdoor stadiums to RV parks to universities, these industrial grade access points have proven to last against the elements.

Expanded Network Solution | POWER SOURCE

Power all your indoor or outdoor access points with one power source. The EGS Series of PoE/PoE+ L2 switches provide you with enough power and ports to connect anything from small businesses to enterprise level business.
